

# SAHIL SANJAY KURBET

Belagavi, Karnataka, India

Phone · Email · LinkedIn · GitHub

## PROFESSIONAL SUMMARY

Electronics and Communication Engineering student specializing in Embedded Systems, IoT, and Wireless Power Transfer. Proficient in Embedded C, ESP32, and cloud-based monitoring architectures. Key experience includes designing an Autonomous Drone Wireless Charging Pads with real-time IoT analytics.

## EDUCATION

|                                                                                        |                                |
|----------------------------------------------------------------------------------------|--------------------------------|
| Jain College of Engineering and Research                                               | Belagavi, KA                   |
| Bachelor of Engineering in Electronics and Communication Engineering (CGPA: 7.92 / 10) | 2022 – Present (Exp. Jan 2027) |
| GSS PU College                                                                         | 2021 – 2022                    |
| Pre-University Course (PUC)                                                            | Percentage: 62%                |
| Amrita Vidyalayam                                                                      | 2021                           |
| Secondary School Leaving Certificate (SSLC)                                            | Percentage: 70%                |

## TECHNICAL SKILLS

Languages: C, Embedded C, Verilog, HTML

Hardware & IoT: ESP32, Arduino, Wireless Power Transfer, PCB Design, Sensor Interfacing Tools & Platforms: KiCad, Proteus, Arduino IDE, MATLAB, VS Code, ThingSpeak Competencies: Hardware Debugging, Circuit Prototyping, Technical Documentation

## PROJECTS

|                                                                                                        |          |
|--------------------------------------------------------------------------------------------------------|----------|
| Autonomous Drone Wireless Charging System                                                              | Nov 2025 |
| Lead Hardware Developer – Jain College of Engineering and Research                                     |          |
| • Engineered an autonomous docking system with custom coils delivering >85% power transfer efficiency. |          |
| • Integrated ESP32 microcontroller with a real-time IoT dashboard for dynamic cloud power monitoring.  |          |

## INTERNSHIPS

|                                                                                                                                                                                                                              |                     |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|
| Web Development Intern (Remote)                                                                                                                                                                                              | Mar 2025 – Apr 2025 |
| • Developed responsive front-end web pages using HTML, CSS, and JavaScript with Git/GitHub workflows.                                                                                                                        |                     |
| • Improved page loading speeds by 20% through optimized asset loading and code restructuring.                                                                                                                                |                     |
| Embedded Systems & IoT Intern   Emertxe Information Technologies                                                                                                                                                             | Aug 2026            |
| • Actively gaining hands-on industry experience in Embedded Systems and IoT by developing ESP32 real-time firmware, configuring ADC peripherals, and managing hardware-software integration using Wokwi and PlatformIO Labs. |                     |

## WORKSHOPS

|                                                                                                      |          |
|------------------------------------------------------------------------------------------------------|----------|
| VLSI Design & Semiconductor Industry Workshop (Two-Day)                                              | Aug 2026 |
| ChipXpert Technologies Private Limited – Hands-on exposure to VLSI workflows and chip architectures. |          |

## CERTIFICATIONS

|                                                     |          |
|-----------------------------------------------------|----------|
| Computer Hardware Basics – Cisco Networking Academy | Apr 2026 |
| Verilog HDL - Hands On – Online Certification       | Feb 2026 |

## ACHIEVEMENTS

|                                                                                                                                                                                |      |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| Top 3 Finalist – Make for Belagavi Make-a-Thon on Feb 2026 TITAN Design Impact Movement, VTU – Ranked in the top 5 among 83 participating teams in a 2-day national hackathon. |      |
| Participant – Pioneer 2025                                                                                                                                                     | 2025 |
| KIT College of Engineering (Autonomous) – Competed in the national-level technical event.                                                                                      |      |

## PERSONAL DETAILS

Strengths: Problem Solving, Hardware Troubleshooting, Team Collaboration

Hobbies & Interests: Embedded Systems Prototyping, IoT Projects, Tech Blogging, Badminton
